# MONTE

**For the development of the Monte collection, Zilverstad turned to Puik Art for assistance, which is a collective of designers from various disciplines. This versatility has led to the discovery of new ideas and a completely new vision of design. The result is a refreshing and contemporary perspective.**

'Each project is discussed in detail with the customer. What type of product must be developed, is there already a basic idea in terms of the shape and type of material? This phase mostly serves as a source of inspiration. The designers then get to work on ideas and images to be able to create the actual designs,' according to Puik Art. 'Extensive product research is also started during this phase. For the Monte series we looked at the shape of a classic chandelier, where we considered many aspects, such as What is so unique about

this shape? What makes it so strong? How can this classic style be elevated to a higher level, thereby making it more attractive to a wider audience?'

The answers to these questions have led to a complete home-collection, characterised by a unique line-up. A classic collection, based on a classic idea with a contemporary twist. The materials used and the sturdy, yet elegant matte and matte/gloss finish ensure that Monte is suitable for use in any type of interior.

## SOLIDO Concrete with mettle

These days it is hard to imagine an interior without exposed concrete. While it used to be normal to try and hide seemingly never-ending raw materials, it is the new norm to actually expose it in all of its glory. Concrete is pure and tough and it provides a certain robust touch. It is a bold and versatile material that is used to make walls and floors, but it can also be used to create contemporary home accessories.

Zilverstad is introducing the industrial look at home with Solido. An extensive collection of eye-catching designs that is ahead of its time. Various chandeliers and lanterns can be used together to create a wonderful combination. The collection can also be complimented with a multi-functional bowl, made from a combination of concrete and glass. Are you adventurous enough?
